

Uni Parent — OpenAI HBCU Conference Pitch Plan

****Theme:**** Make Something That Matters

****Length:**** 2 minutes

****Audience:**** Students, educators, builders, and technology leaders

****Core message:**** Uni Parent helps busy university students build realistic days around school, work, wellbeing, and career progress—without giving up their privacy.

Pitch objective

Leave the audience with one clear belief: a thoughtful daily plan may seem small, but for a student carrying classes, work, family obligations, and career pressure, it can change what is possible.

Two-minute run of show

0:00–0:20 — Begin with the student, not the product

****Goal:**** Establish an immediate, relatable problem.

> College students are told to work hard, build experience, protect their health, and prepare for the future. But for students balancing classes, jobs, and family responsibilities, the problem is rarely ambition. The problem is fitting everything into one day without burning out.

****Delivery note:**** Pause after “rarely ambition.” Let the audience recognize the student before introducing the solution.

0:20–0:40 — Show the gap

****Goal:**** Explain why calendars and generic AI planners are not enough.

> A calendar can tell a student where they must be, but it does not help them decide where studying, rest, and career development can realistically fit. Some AI tools create perfect-looking schedules that ignore real life—or require students to share personal information in the cloud.

0:40–1:10 — Introduce Uni Parent

****Goal:**** State the product and its most important differences in plain language.

> That is why we built Uni Parent. A student enters their goals and fixed commitments, and Uni Parent creates a balanced daily agenda. It protects classes and work, places focused tasks near the student’s best energy period, adds one concrete career step, and leaves open time genuinely open. The plan runs entirely in the browser, so the student’s information stays on their device.

****Demo visual:**** Display the Today page with a complete timeline. Point to one protected commitment, one study block, one career action, and one open period.

1:10–1:35 — Make it real with one student

****Goal:**** Turn the feature list into a human outcome.

> Imagine Maya, a computer science student with two morning classes and an afternoon job. Uni Parent keeps those commitments untouched, finds a realistic study window, suggests one manageable internship-preparation action, and clearly shows what cannot fit. It does not shame her or manufacture more hours. It helps her make an honest plan.

1:35–1:52 — Connect to the conference theme

****Goal:**** Explain why this product matters beyond scheduling.

> A schedule may sound like a small thing. But when a student is carrying school, work, family, and the pressure to build a future, a realistic plan can be the difference between constant overwhelm and steady progress. Technology that matters should respect the whole person using it.

1:52–2:00 — Close with the promise

> Uni Parent does not ask students to do more. It helps them make space for what matters—one realistic day at a time.

End on the product name and tagline:

> ****Uni Parent: Make space for what matters.****

Simple visual plan

Use no more than three visuals during the pitch:

1. ****Opening:**** A crowded student calendar with “Where does everything else go?”
2. ****Demo:**** The Uni Parent Today screen, highlighting protected commitments, focused work, a career action, and open time.
3. ****Closing:**** The Uni Parent logo and “Make space for what matters.”

Avoid feature-heavy slides. The audience should watch the student’s problem become a believable day.

Rehearsal checklist

- Target 230–260 spoken words and finish in 1:50–1:55 during rehearsal.
- Memorize the opening, the first sentence introducing Uni Parent, and the closing.
- Use one student story throughout; do not introduce extra personas.
- Keep the live demonstration under 30 seconds and prepare a screenshot as backup.
- Do not claim that Uni Parent eliminates burnout or guarantees academic outcomes.
- Finish with a pause after the tagline instead of adding an extra explanation.

Optional call to action

If the event expects an explicit ask, replace the final sentence before the tagline with:

> We are looking for HBCU students and advisors to help us test Uni Parent, expand its career guidance, and build a planning tool around the realities students actually live.
